

# Folding tent

Folding tents offer great flexibility because they are very compact and light. You can put the tent up in less than sixty seconds (with only two people) and contrary to what many people often think, a folding tent is absolutely no less sturdy than any other tent type. Our easy-up party tents are thoroughly tested and optimised, as a result of which they are the sturdiest party tents on the market.

## DID YOU KNOW...

... You can always recognise an Above & Beyond folding tent from its **green spring**?

...by now, more than 25,000 folding tents from Above & Beyond have found their way to a new owner in more than 20 countries globally?

## The folding tent: compact & quick to put up

### ROOF AND SIDE WALLS:

- Polyester or PVC light
- Wind and water tight thanks to Velcro attachment
- Anti-fungal, UV-blocking and fire retardant
- PVC protective caps to protect the corners against abrasion
- Can be printed fully on both polyester and PVC light

### FRAME:

- Fully aluminium
- Square profile
- Extra reinforced corners
- Connectors from full aluminium
- Sturdy 10 x 10 cm aluminium base plates
- Rubber protection on each pole (prevents tearing of the roof canvas)
- Green spring for ideal roof tension and absorption of shocks in bad weather.

#### PRINTING:

- Fully printable
- High quality printing on both polyester and PVC light
- Choice of printing on white or black fabric
- Provide your own design and let us create your eye catcher
- Complete range of promo tools to expand your printed folding tent

#### OPTIONS AND EXTENSION:

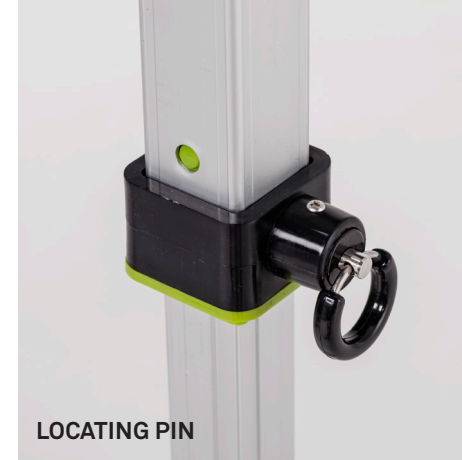

- Modular thanks to the aluminium connector or Velcro attachment
- Rain gutters divert water along both the length and width
- Heating and lighting specially developed for frame of our folding tent
- Several types of anchoring possible, for both hard and soft surfaces
- Easy to transport and store thanks to its durable protective cover or transport bag with wheels
- All components are available individually

BASE PLATE

LOCATING PIN

RING FOR STORM STRAP

THREE-WAY CONNECTOR

CAP FOR POLE

INNER ROOF CANVAS HOOK

- The **green spring** acts as a shock absorber and keeps the roof canvas under tension.
- The large **base plates** ensure that the tent always stands sturdily on its feet and offers the option of extra anchoring.
- Thanks to the extremely strong **locating pin** the tent is easily height-adjustable.
- Thanks to its **rings** every folding tent from Above & Beyond can be anchored easily with storm straps at each corner of the roof canvas.
- All **connectors** are made from full aluminium and guarantee an extra long life.
- The **cap** with PVC protection at the top of the roof canvas prevents damage and keeps the roof canvas nicely in place. The cap also mainly serves to stop the roof canvas falling into the tent, between the legs, if it collapses. With canvases that do not have this, there is always a flap of fabric left over.
- For each pole, the roof canvas is equipped with a **PVC protector** that protects the roof against abrasion and the resulting damage. Thanks to its two Velcro straps, it stays nicely in place.
